

# AMOGH SOMISETTY

(925) 236-2600 | somisett@calpoly.edu | amogh.site | github.com/Asomisetty27 | linkedin.com/in/amoghsomisetty

*Engineering student with operations, analytics, and leadership experience across three real settings: cut production cycle time over 40% through process improvement at Natera, lead a client-facing engineering consulting organization as president, and founded a data-analytics tool shipped as open source. Strong quantitative and business-analysis skills, a process-improvement and risk mindset, clear written and verbal communication, and fluency with AI productivity tools. Seeking to bring analytical rigor and an enterprise mindset to Global Operations.*

## EDUCATION

**California Polytechnic State University, San Luis Obispo**  
*B.S. Electrical Engineering*

Expected June 2028  
*San Luis Obispo, CA*

- **Relevant coursework:** Probability & Statistics, Data Analysis, Computer Architecture, Economics, Technical Communication

## EXPERIENCE

### President

*Poly Engineering Consulting — client-facing engineering consulting organization*

Sept 2024 – Present  
*San Luis Obispo, CA*

- Lead a client-facing consulting organization: scope and deliver projects for external partners, manage cross-functional student teams, and own stakeholder communication, timelines, and delivery from intake to handoff.
- Built and run the org's operating model — a member, project, and client-management platform (PEC Nexus) with analytics and governance — to standardize the intake-to-delivery process and give leadership real-time reporting.

### Lab Operations Intern — Process Improvement & Validation

*Natera*

June 2025 – Sept 2025  
*Pleasanton, CA*

- Drove operational efficiency on a high-throughput production line: cut validation and packaging cycle time from ~20 min to 10–12 min (>40%) and wrote Python automation that replaced manual barcode lookups and report retrieval.
- Ran root-cause and failure analysis across electrical, mechanical, and software systems, and authored reference documentation (SOPs) the team adopted to prevent recurrence.

### Founder & Lead

*Theta — open-source data-analytics tooling (independent research)*

May 2026 – Present  
*San Luis Obispo, CA*

- Built and shipped an open-source analytics tool that ingests high-volume real-time telemetry and flags anomalies fixed-threshold reporting misses; analyzed data across five production fleets (~62k records) in Python.
- Enforced a rigorous risk and verification methodology — every result checked against a statistical null before it ships — and validated a finding that a third party independently confirmed months later.

## SKILLS

**Data & Analytics:** Python (pandas, data analysis & visualization), SQL (PostgreSQL / Supabase), Excel / Google Sheets, quantitative & statistical analysis

**Operations & Process:** process improvement, operational efficiency, root-cause / failure analysis, SOP documentation, workflow automation, project delivery (Agile / iterative)

**Tools & AI:** Microsoft Office (Word, Excel, PowerPoint), AI productivity tools (chat-based assistants, Copilot-style), Git, Linux

**Communication & Leadership:** client-facing communication, cross-functional team leadership, technical writing, presentations, stakeholder management

## LEADERSHIP & ACTIVITIES

**Avionics Electrical Lead, Poly UAS:** lead a cross-functional hardware program

Apr 2026 – Present

**Lab Assistant, Cal Poly EPIC:** teach embedded systems to precollegiate students

Summer 2026
